# IBM Hack Challenge 2K22

## Chosen Problem Statement

# Digital Payments Book

### Description

The payment book application is designed to maintain customers, payments, and their purchases. A retailer will be an admin of the application and each customer of the retailer's shop will be the user. Customers can create their account in the payment book app by reading and agree to the terms and conditions of the shop.

## Technology Used

FASK

DOCKER

IBM DB2

OPENSHIFT

## IBM Hack Challenge 2K22

# Expected Solution

Once a user created their account they can login to their account by using their own credentials, users will be able to see their purchase history, pending payments and also if the user is having any doubt or complaints they can contact the retailer by using contact us service. Admin will maintain data about purchases made by the customers & can see payment details and pending payment of the customers. Admin will send alerts to the customers if there is any due for payment or payment is pending for a long time.
